

The Design of Interactive Computational Media

Class 6: 16 Oct. 2002

Information Design

Hour 1:
Graphic Design and Typography Fundamentals

Hour 2:
Data Display and Information Visualization

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.1

Graphic Design & Typography Fundamentals

- Information design
- Norman's stages of action in HCI
- Perceiving, interpreting, and comprehending information
- Elements of graphic design and typography
- Graphic design principles
- Example: source code typesetting

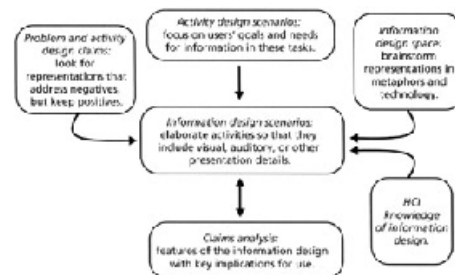

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.2

Information Design

- Interactive computational media are systems that allow users to carry out *activities*
- Functionality is determined in *activity design* phase
- Systems typically display *objects* on one or more screens, and display representations of possible user *actions* (e.g., menus)
- *Information design* represents and arranges these objects and possible user actions so they are perceptible and comprehensible

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.3

Information Design (Rosson & Carroll)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.4

Norman's Stages of Action in HCI

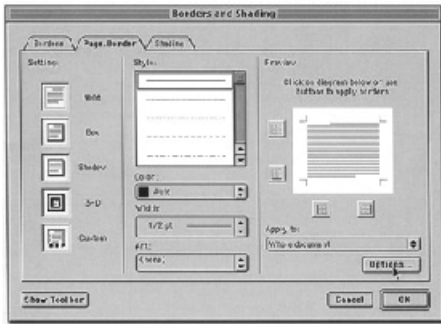

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.5

Perceiving Information

- Gestalt principles of perceptual organization
 - Proximity
 - Elements near each other tend to be seen as a group
 - Similarity
 - Elements that share visual characteristics (shape, color, etc.) tend to be seen as a group
 - Closure
 - Tendency to organize elements into complete, closed figures
 - Area
 - Symmetry
 - Continuity
- Typography & graphic design vocabulary & principles (most of the remainder of first hour of this lecture)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.6

Example: Microsoft Word Page Border Dialog Box

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.7

Interpreting Information

- Familiarity and appropriateness, e.g., in choice of interface vocabulary
 - Examples from Johnson's *GUI Bloopers* (C&R, pp. 120-1)
 - Inconsistent terminology, unclear terminology, geekspeak, careless writing, clueless error messages, etc.
- Choice of imagery
 - Example: Microsoft Word text alignment controls
- Visual affordances
 - Example: Microsoft Word scrollbars

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.8

Comprehending Information

- Visual consistency
 - Example: Menu organization consistent across screens
- Visual metaphors
 - Example of virtual science fair exhibits:
Lab journal, documentary (film), multimedia notebook, electronic whiteboard, Web site
- Data display and information visualization
 - Example of information models:
Hierarchies for data display and visualization
 - Second hour of this lecture
- Dynamic displays
 - Example: Algorithm animation (to be shown later)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.9

The Graphic Design of "Visible Language"

- Typography
 - Typographic vocabulary
 - Typesetting
- Symbolism
 - Icons
 - Graphics, illustrations
- Colour, texture, and value
- Page composition and spatial layout
 - Grids, rules, space
 - Form and structure
- Sequencing, timing, animation
- Design principles
 - Emphasis
 - Guiding the eye
 - Consistency and clarity
- Figures from Baecker and Marcus, *Human Factors and Typography for More Readable Programs*, 1990, ACM Press

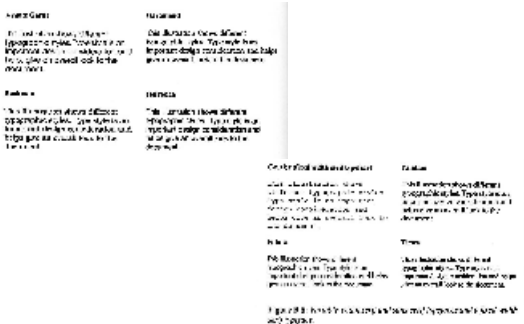

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.10

Typographic Vocabulary

- Typeface or style of lettering
- Fixed width or variable width
 - Serif or sans serif
 - Goal of typeface design: enhancing legibility and readability
- Type parameters
 - Size, measured in points, 1 point = 1/72"
 - Weight
 - Proportion
 - Slant
- Character set — Usually ASCII, but ...
 - Mathematical and special symbols
 - Special conditions
 - Resolution

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.11

Common type faces (Baecker and Marcus, 1990, p. 298)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.12

Textures (Baecker and Marcus, 1990, p. 312)

Figure 6.30 Textures.

Page Composition

- Page and screen size and proportion
- Layout grids
- Spatial layout

Alternative proportions of pages and screens

(Baecker and Marcus, 1990, p. 293)

Figure 6.21 Alternative proportions of pages and screens.

Layout grids within various page sizes

(Baecker and Marcus, 1990, p. 294)

The use of a grid is essential to the organization of page content. Grids provide a framework for the placement of text, images, and other elements. They help to create a balanced and visually appealing layout. The grid should be flexible enough to accommodate different page sizes and proportions.

Typical page layout with primary and secondary features

(Baecker and Marcus, 1990, p. 295)

Figure 6.22 Typical page layout with primary and secondary features.

Sequencing, Timing, Animation

- Sequencing
 - Order of images
 - Use of repetition, cycles
- Timing
 - Rhythm and pacing
 - Anticipation
- Animation
 - Display of series of images in rapid succession
 - Possibilities for smooth motion

```

Chapter 1 phone.c
// Our approach overdesigned.
// Our words are large, our code is small.
// Our style is plain, our code is plain.
// Our style is plain, our code is plain.

```

The Principles Applied to This Example

Legibility	Confusion of "." versus ","
Readability	">=" not very readable; confusing variables and reserved words
Clarity	Two uses of ""
Emphasis	Function names, global variables in bold
Simplicity	<i>Our approach overdesigned</i>
Consistency	Use of boldface, italics
Relationships	Display of comments, nesting context
Distinctiveness	Parts of function definition, preprocessor definition
Focus and navigability	File names, function names, footnotes

- ### Summary
- Information design
 - Norman's stages of action in HCI
 - Perceiving, interpreting, & comprehending information
 - Elements of graphic design and typography
 - Graphic design principles
 - Example: source code typesetting

Questions and Discussion

Break

Data Display and Information Visualization

- Purpose
- Excellence in data display
- Techniques for data display
- Graphical integrity
- Pitfalls and flaws in data display
- Opportunities in data display
- Applications of information visualization
- Example: Animation of sorting algorithms

Why Data Display & Information Visualization

- What is computer science?
 - The study of algorithms
 - The study of systems design and software engineering
 - The study of data management and data processing
- We manage and process data by computers because:
 - Data sets are large
 - Data sets change over time
 - Data sets embody complex interrelationships
- But how do we comprehend the data?
 - How do we know what is there and what is not?
 - How do we know if there are errors in the data?
 - How do we know what relationships exist in the data?
 - How do we know what "the data means"?

Why Data Display & Information Visualization

- Usually, we don't, because we can't see it and we can't visualize/perceive/understand it
- The purpose of data display and visualization techniques is to help us see the data and understand the data
- "We thrive in information-thick worlds because of our marvelous and everyday capacities to select, edit, single out, structure, highlight, group, pair, merge, harmonize, synthesize, focus, organize, condense, reduce, boil down, choose, categorize, catalog, classify, refine, abstract, scan, look into, idealize, isolate, discriminate, distinguish, screen, sort, pick over, group, pigeonhole, integrate, blend, average, filter, lump, skip, smooth, chunk, inspect, approximate, cluster, aggregate, outline, summarize, itemize, review, dip into, flip through, browse, glance into, leaf through, skim, list, glean, synopsise, winnow wheat from chaff, and separate the sheep from the goats." (Tufte, 1990, p. 50)
- Computer graphics has introduced a revolution in data display, but it is easier to produce visual garbage than it is to produce elegant visual representations that convey meaning

Data sets displayed as numbers & as graphs

(Tufte, 1983, pp. 13,14)

Graphical Displays Should (Tufte, 1983, p. 13)

- “Show the data
- Induce the viewer to think about substance rather than about methodology, graphic design, the technology of graphic production, or something else
- Avoid distorting what the data have to say
- Present many numbers in a small space
- Make large data sets coherent
- Encourage the eye to compare different pieces of data
- Reveal the data at several levels of detail, from a broad overview to the fine structure
- Serve a reasonably clear purpose: description, exploration, tabulation, or decoration
- Be closely integrated with the statistical and verbal descriptions of a data set.”

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.55

Excellence in data display

- Tufte goes on (1983, p. 51):
 - “Graphical excellence is the well-designed presentation of interesting data — a matter of *substance*, of *statistics*, and of *design*.
 - ... consists of complex idea communication with clarity, precision, and efficiency.
 - ... is that which gives the viewer the greatest number of ideas in the shortest time with the least ink in the smallest space.
 - ... is nearly always multivariate.
 - ... requires telling the truth about the data.”
- And finally (1983, p. 191):
 - “What is to be sought in designs for the display of information is the clear portrayal of complexity. Not the complication of the simple, rather the task of the designer is to give visual access to the subtle and the difficult — that is, *the revelation of the complex*.”

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.56

Data Display Techniques : Tables

- Used for organizing and displaying
 - Lists
 - Series of related numbers, categories, concepts, etc.
- Example: Comparing techniques for data display

Technique	Major use
Tables	Organized description of relationship among discrete elements
Charts and graphs	Pictures of relationships among quantitative data
Maps	Displays of geographical or spatially-distributed data
Diagrams	Portrayals of interrelationships among abstractions, e.g., block diagram, tree chart, pert chart

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.57

Table of law school #s applying & admitted (Tufte, 1990, p. 29)

	1984	1985	1986	1987	1988	1989	1990	1991	1992
APPLICANTS	15,000	15,500	16,000	16,500	17,000	17,500	18,000	18,500	19,000
ADMITTED	1,500	1,600	1,700	1,800	1,900	2,000	2,100	2,200	2,300
REJECTION RATE	89.3%	89.7%	89.4%	89.1%	88.8%	88.5%	88.2%	87.9%	87.6%
ADMISSION RATE	10.7%	10.3%	10.6%	10.9%	11.2%	11.5%	11.8%	12.1%	12.4%

Data Display Techniques: Charts & Graphs

- Distributions of one quantitative variable
- One quantitative variable with labels
- Two quantitative variables
- Time series
- Multiple integrated time series
- Two quantitative variables with categories & colour

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.59

Distributions of one quantitative variable: point graph, histograms, percentile graphs (Cleveland, 1985, pp. 124, 126, 128)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.60

Distributions of one quantitative variable with labels: Dot chart (Cleveland, 1985, p. 145)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.61

Two quantitative variables (Tufte, 1983, p. 47)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.62

Time series (Cleveland, 1985, pp. 181, 180, 182, 183)

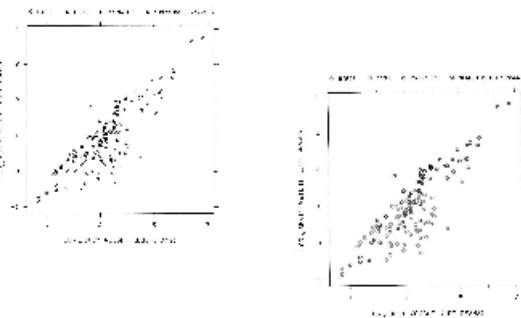

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.63

Multiple integrated time series (Tufte, 1983, pp. 30)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.64

Scatterplot of two quantitative variables with categories and colour (Cleveland, 1985, p. 207, opposite p. 213)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.65

Data Display Techniques: Maps

- Data maps of discretized data
- Data maps of topographic, continuous data

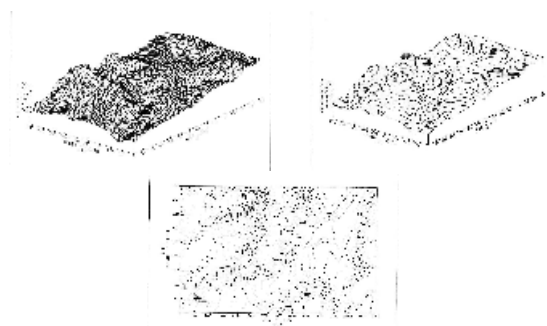

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.66

Data maps of discretized data (Tufte, 1983, p. 17)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.67

Data maps of topographic, continuous data (Kerlow and Rosebush, 1986, pp. 244, 246, 246)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.68

Data Display Techniques:
Small Multiples and Table-Graphics

- A small multiple
- A table graphic
- A small multiple of table graphics

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.69

A small multiple (Tufte, 1983, p. 42)

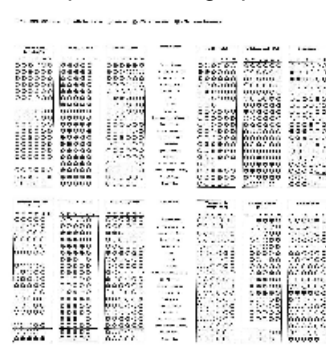

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.70

A table graphic (Tufte, 1983, p. 158)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.71

A small multiple of table graphics (Tufte, 1983, p. 174)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.72

Graphical Integrity

- Lying with data graphics
 - The lie factor
 - Compounding the lie factor: what is being compared? Length or area?
 - The importance of context
- Unintentional lies due to graphical perception

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.73

Lie factor of 14.8, truthful graphic, and needlessly decorated version (Tuft, 1983, pp. 57, 58, 59)

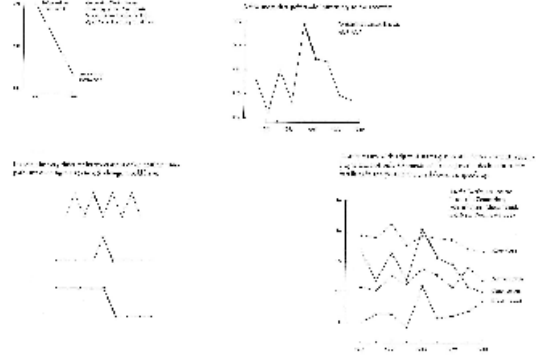

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.74

Compounding the lie: length vs. area (Tuft, 1983, p. 70)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.75

The importance of context (Tuft, 1983, pp. 74, 74, 75, 75)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.76

Visual perception problem (Cleveland, 1985, p. 277)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.77

Pitfalls in Data Display

- Data ink and the data ink ratio
- Chartjunk
 - Vibrations
 - Ducks

High and low data ink ratios (Tufte, 1983, p. 94)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.79

Data ink maximization (Tufte, 1983, p. 125)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.80

Chartjunk: Vibrations (Tufte, 1983, p. 108)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.81

Ducks: Silly use of colour (Tufte, 1983, p. 118)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.82

Ducks: Preposterous use of colour (Tufte, 1990, p. 34)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.83

Opportunities in Data Display: Colour

- Data map with colour
- Small multiples diagram with colour
- Geometry proof with colour

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.84

Data map with colour (Tufte, 1990, p. 40)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.85

Small multiples diagram with colour (Tufte, 1990, p. 63)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.86

Geometry proof with colour (Tufte, 1990, p. 85)

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.87

Applications of Information Visualization

- Banking and finance
- Industrial and manufacturing
- Resources and exploration
- Medical
- Educational
- Software development

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.88

Example: Visualization of Sorting Algorithms

QuickTime™ and a Sorenson Video decompressor are needed to see this picture.

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.89

QuickTime™ and a Sorenson Video decompressor are needed to see this picture.

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.90

The Principles Applied to This Example

Legibility	
Readability	Simple labels on axes of graphs
Clarity	Vertical rectangles, horizontal rectangles, numbers
Emphasis	Highlighting elements being compared
Simplicity	Lines and dots wherever possible
Consistency	Colours for depicting being compared, in correct position
Relationships	Colour, highlighting, and timing to show relationships
Distinctiveness	Element values portrayed by one clear dimension only
Focus and navigability	Simple rectangular grid in 9-way race

Design of Interactive Computational Media Sep.-Dec. 2002 ©1992-2002, Ronald M. Baecker Slide 6.91

Summary

- Purpose
- Excellence in data display
- Techniques for data display
- Graphical integrity
- Pitfalls and flaws in data display
- Opportunities in data display
- Applications of information visualization
- Example: Animation of sorting algorithms
