

# So, You Want to Know How to Make a Fleece Blanket?

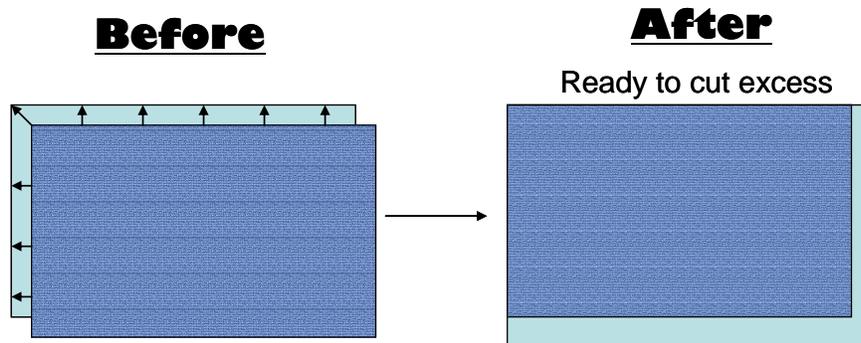

Before you do ANYTHING, make sure you have:

- 2 pieces of fleece, at least 1.5 yards in length
- One pair of SHARP scissors per person
- Plenty of floor space to work

It takes about 2 hours to make one blanket. Sometimes working in teams is helpful.

## Step 1

Lay two pieces of fleece on top of each other, taking care that the WRONG sides are facing **IN**. Align two sides and cut off excess (L-shaped) so that both are the exact same size. Always keep fleece laid-out on the floor.

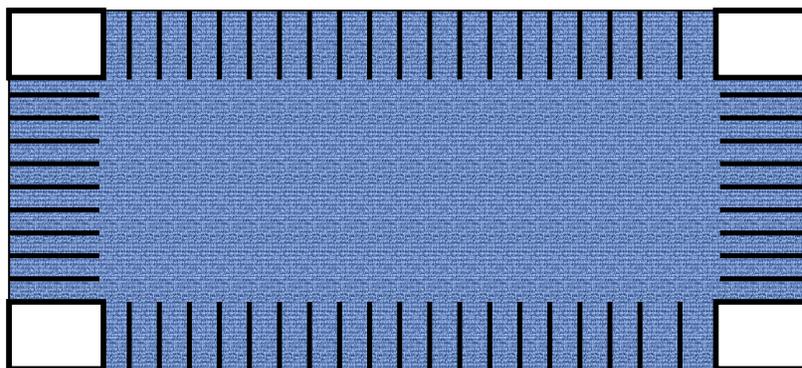

## Step 2

Cut out a square (about 5" x 5") from each corner using the provided template.

## Step 3

Fringe BOTH pieces of fabric on all four sides by cutting strips up to the height of the removed corner. The strips should be about 1 inch wide.

## Step 4

Once all four edges have been fringed, tie square knots to fasten both pieces together. Tighten all knots and tie again (as needed) to try to prevent the knots from unraveling.
