State of the Art (Film) *Avatar: the way of water*

Alejandro: Go on.

What is this course about?

- Learn anatomy, modeling, rigging, and interactive animation of 3D faces.
- Read, understand, present and critique state of the art facial research papers.
- Model and animate expressive 3D faces using existing software and rigs: Metahuman, Maya, JALI.
- Build technical prototypes to enable creative applications in facial animation.

Evaluation:

- Creative experiment/prototype 30%.
- Technical Paper presentation 30%.
- Project 40% (mid-term evaluation 10%).

Identity

Which of these faces is Keanu Reeves?

Identity

Who are all these people?

Are deep fakes, simply modern day forgeries?

Action: Grimace
Muscle: Risorius/Platysma
Signature: Stretched lower lip

Control

What is research in facial animation about?

- **Representation** (FACS, muscles, strains, manifolds...).
- **Transfer/Re-targeting** (latent spaces, landmarks...).
- **Acquisition/Modeling** (selfies, scans, sketches, morphable models...).
- **Rigging** (deformers, simulation, performance-data...).
- **Animation** (keyframing, keyposing, video, audio...).
- **Behaviour** (emotion, speech, song, gestures, cognition, sentience...).
- **Appearance** (skin, wrinkles, eyes, hair...).
- **Interactive Control** (audio, video, controllers, UI...).

CHALLENGE:

Face representations are **HIGH** dimensional!

Auto-computed lower dimensional latent spaces have no animator intuition.

Animator-centric representations are still high dimensional and highly redundant.

=> seek animator-centric latent spaces to control with low dimensions and redundancy.
