University of Toronto

### Software Maintenance Lecture 20:

## Software Evolution

Software types

Laws of evolution

# Maintaining software

types of maintenance

challenges of maintenance

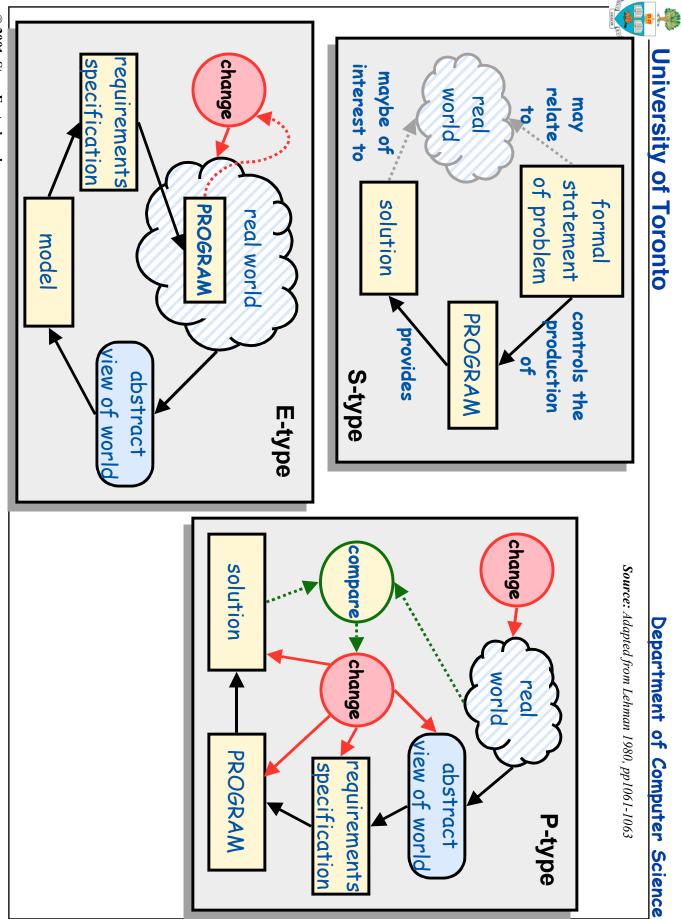

# Reengineering and reverse engineering

## Software Reuse

© 2001, Steve Easterbrook	This software is inherently evolutionary changes in the software and the world affect each other	acceptance: depends entirely on opinion and judgement	A system that becomes part of the world that it models	E-type Programs ("Embedded")	This software is likely to evolve continuously because the solution is never perfect, and can be improved because the real-world changes and hence the problem changes	acceptance: Is the program an acceptable solution to the problem?	imprecise statement of a real-world problem	P-type Programs ("Problem-solving")	This software does not evolve. A change to the specification defines a new problem, hence a new program	acceptance: Is the program correct according to its specification?	problem can be stated formally and completely	S-type Programs ("Specifiable")	Source: Adapted from Lehman 1980, pp1061-1063	Program Types	University of Toronto Department of C
CSC444 Lec20 2															Department of Computer Science

© 2001, Steve Easterbrook CSC444 Lec20 4	<b>Conservation of Familiarity</b> During the active life of a program the amount of change in successive releases is roughly constant	<b>Conservation of Organizational Stability</b> During the active life of a software system, the work output of a development project is roughly constant (regardless of resources!)	Fundamental Law of Program Evolution Software evolution is self-regulating with statistically determinable trends and invariants	Increasing Complexity As software evolves, its complexity increasesunless steps are taken to control it.	Any software that reflects some external reality undergoes continual change or becomes progressively less useful The change process continues until it is judged more cost effective to replace the system entirely	University of Toronto Laws of Program Evolution Source: Adapted from Lehman 1980, pp1061-1063. See also, van Vliet, 1999, Pp59-62

sili's maintenance process models: Quick-fix model changes made at the code level, as easily as possible rapidly degrades the structure of the software
sili's maintenance process models: Quick-fix model changes made at the code level, as easily as possible
sili's maintenance process models: Quick-fix model
sili's maintenance process models:
"mission orientation" - development team make a long term commitment to maintaining the software
maintenance becomes a reverse engineering challenge
investment in knowledge and experience is lost
"throw-it-over-the-wall" - someone else is responsible for maintenance
Maintenance philosophies
